Teachers L14A1 – Answers

These are the answers that the students should supply, though their wording may vary slightly and they might have more insights.

1. The IP Address belonging to the Web Site Administrator is most likely 192.168.64.1. He accesses phpMyAdmin which is a database administration tool.

2. The IP Address belonging to the attacker is most likely 192.168.64.12. He is trying to access pages with names such as backdoor.php, administrator.php, robots.txt, and Trojan.php.

3. He was getting a 404 code. He was getting this error code because the web pages he was looking for didn't exist.

4. He is using HTTP/1.1. He is using what appears to be Chrome, but it also lists Mozilla and Safari.

5. The IP Addresses belonging to the legitimate users appear to be: 192.168.64.1, 192.168.64.3, 192.168.64.7, and 192.168.64.15
