Teachers L5A2 – Answers

These are only suggested answers, students' answers may vary

vSphere

- Only allows one person to be connected
- Able to view entire start-up process
- Networking on VM does not need to be working to connect
- Able to connect without additional software

Both

- As if physically on machine
- Allows users to complete basic user tasks
- Allow users to manage computer settings

RDP

- Allows multiple users to log in concurrently
- Networking must be set up to connect over RDP
- Must enable RDP in order to connect
- Connection relies on network/internet connection (if either side loses connectivity, the connection will go down)
